DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sekine (6147652).

Regarding Claims 1 and 13, Sekine shows a self-resonating, folded monopole 601, e.g., in Fig. 6 used to be inserted into a portable communication device made of dielectric material so that energy radiates therethrough, connected to the transceiver therein and disposed above a ground plane 602 (or 102) disposed upon the printed circuit board of the device. It would have been obvious to the skilled artisan that, in use, the antenna of Sekine may be employed in an portable device, such as a medical device, in order to provide a communication link in such a system. Regarding Claims 3-12 and 14-21, the specific composition and geometry of the housing is obviously dependent upon the system it is to be employed and such characteristics are well within the level of ordinary skill and made obvious in the design; and the specific frequency of operation is obvious dependent upon the service band of operation allocated by the FCC; the dielectric permittivity and other properties and compositions of the conductor, and printed circuit are obvious to the skilled artisan as these are common materials used in antenna construction; and the placement of the antenna within the

Art Unit: 2828

housing relative to the p.c. board and ground plane, and its specific geometry conforming to the housing, are all parameters used to match antennas.

Response to Arguments

3. Applicant's arguments filed 3/11/2005 have been fully considered but they are not persuasive. Specifically the device of Sekine is used within a dielectric housing and has conductive portions therein/thereon. The structure claimed is as shown in Sekine. Therefore the rejection stands.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
